

# CR5000 Measurement and Control System

A rugged, high-performance data acquisition system

## System Description

### Design Features

- Stand-alone unit offering high performance and an environmentally rugged design
- Maximum throughput of 2k to 5k measurements per second (configuration dependent)
- Powerful instruction set that supports measurement of most sensor types, on-board processing, data reduction, and intelligent control
- Backlit display allowing numerical or graphical display of stored data
- PC-card slot for extended data storage and transporting data to a PC
- Battery-backed SRAM memory and clock ensuring data, programs, and accurate time are maintained while the CR5000 is disconnected from its main power source
- Robust ESD protection
- Low power, 12 Vdc operation
- Data values stored in tables along with a time stamp and record number

### Data Storage Capacity

Data and multiple programs are stored in internal battery-backed SRAM. Up to one million data points can be stored in the table-based memory structure. Storage capacity can be increased using Type I, II, or III PC-cards.

### Operating System

The operating system includes measurement, processing, and output instructions for programming the datalogger. Measurement instructions specific to bridge configurations, voltage outputs, thermocouples, pulse/frequency signals, vibrating wires, Synchronous Devices for Measurement (SDMs), and multiplexers are standard. Processing instructions support algebraic, statistical, and transcendental functions for on-site processing. Output instructions process data over time and control external devices. These instructions include averages, maximums, minimums, histograms, rainflow histograms, level crossings, and FFTs. Multiple datalogger programs can be stored in the CR5000 allowing data to be collected from a series of independent tests.

Cover photo applications: Greenhouse monitoring and control; Heavy equipment monitoring; Eddy covariance flux measurements; Passenger vehicle/light truck performance testing.

## Connections and Measurement Types

### Analog Inputs

Twenty differential (40 single-ended) input channels support five full-scale ranges ( $\pm 20$  mV to  $\pm 5000$  mV) at 16-bit measurement resolution. Larger signal voltages are accommodated with precision 2:1 and 10:1 input voltage divider modules.

### Period Averaging

Any of the 40 single-ended input channels can be used for period averaging measurements. Period averaging measurements can be used to monitor pulse width and pulse counts.

### Pulse Counting Channels

Two 16-bit pulse channels count switch closures, low-level ac pulses, and high frequency square waves.

### Control Ports

Eight digital input/output ports provide pulse counting, edge timing, status sensing, and on/off control. Three ports read SDM peripherals (see Channel Expansion) and sensors, such as the CSAT3 and CS7500.

### Analog Outputs

Four switched precision voltage outputs provide excitation for resistive bridge measurements, programmable over a  $\pm 5000$  mV range. Four switched current outputs are available for resistance measurements, programmable over a  $\pm 2.5$  mA range. Two continuous analog outputs are provided for strip chart recording or driving proportional controllers.

### Power Outputs

Two 5 V and two 12 V terminals are provided for powering sensors and peripherals continuously. Two switched 12 V outputs provide an unregulated 12 volts that can be switched on and off under program control.

### PC-Card Slot

The PC-Card Slot allows a single PC-card to be used for expanding the CR5000's storage capacity or transporting data or programs from the datalogger to a PC. Typically a Type II Flash card or Type III hard drive is used. The storage capacity of Type II Flash cards exceeds 1 gigabyte. Type III hard drives provide data storage capacities exceeding 1 gigabyte but may not be suitable for all environments.

### Transient Protection

Rugged gas tubes protect all terminal block inputs and outputs from electrical transients. The CR5000 is CE compliant under the European Union's EMC Directive.

## Channel Expansion

### Synchronous Devices for Measurement

SDMs are addressable peripherals that expand the CR5000's measurement and control capabilities. For example, SDMs are available to add control ports, analog outputs, pulse count channels, interval timers, or even a CANbus interface to your system. Multiple SDMs (in any combination) can be connected to one CR5000.

The SDM-CAN (left of CR5000) allows a vehicle's on-board diagnostic system to output standardized data streams that are synchronized with other measurements and stored in the CR5000.

### Multiplexers

Multiplexers increase the number of sensors that can be measured by a CR5000 by sequentially connecting each sensor to the datalogger. The CR5000 is compatible with the AM16/32, AM25T, and AM416. Several multiplexers can be controlled by a single CR5000.

### Base Options

#### Rechargeable Base

The rechargeable base includes an internal 7 Ahr sealed rechargeable battery that can be charged from vehicle power, solar panels, or ac power. For charging the battery via ac power, a 110 V wall charger is offered for US customers or other countries with 110 Vac outlets. A 100 to 240 Vac wall charger is also available.

When using vehicle power, our DCDC18R Boost Regulator increases the vehicle's supply voltage to charging levels required by the CR5000.

#### Low-Profile Base (no battery)

The low-profile option requires a user-supplied dc source. It should be chosen when the system's power consumption needs a user-supplied deep cycle battery or when it's advantageous to have a thinner datalogger.

## Communications

Remote stations can be accessed via Ethernet, phone modems (including cellular), spread spectrum radios, and short haul modems. The CR5000's optically isolated RS-232 port allows the CR5000 to be connected directly to a PC. Real-time and historical data can be displayed on-site using a PC, DSP4 Heads Up Display, or the integrated keyboard/display. Development of CR5000 communication capabilities is ongoing; contact an applications engineer for details.

## Operation in Harsh Environments

Standard operating range is  $-25^{\circ}$  to  $+50^{\circ}\text{C}$ ; an extended range of  $-40^{\circ}$  to  $+85^{\circ}\text{C}$  is available. A weather-proof enclosure and the use of desiccant is recommended for protection from humidity and most contaminants.

Photo courtesy of Gayle Dana, DRI

*The wide temperature range of Campbell Scientific equipment allowed this Eddy covariance station to provide data for energy balance studies in the McMurdo Dry Valleys of Antarctica.*

## Software

**Software tools for the CR5000 include PC9000 and LoggerNet. Detailed information is contained in the PC9000 and LoggerNet product literature.**

### PC9000 Application Software

PC9000 is shipped with the CR5000. You can create programs, collect and display data, and generate reports.

#### Program Generator/Editor

- Supports pick-and-click programming for most commercially available sensors
- Creates a datalogger program file, wiring diagram, and data information file

#### Communication/Data Collection

- Supports Ethernet, short haul modems, and direct links

*PC9000 displays historical time series, rainflow, level crossing, and FFT data in a time-based "movie" format or an instantaneous snapshot format.*

### Data Display

- Monitors real-time data using tabular displays, virtual meters, virtual oscilloscopes, X-Y plotters, FFTs, level crossing, rainflow histograms, and histograms
- Supports 10 multi-charts with up to eight fields each

### LoggerNet

LoggerNet allows you to set up and manage a network of dataloggers. It's comprised of one server application and several support applications. It supports automated network communications via Ethernet, telephone modems, short haul modems, spread spectrum radios, and direct links.

LoggerNet's server application handles all communication functions with individual CR5000s in the network, manages requests for data from support applications, and provides datalogger network administration functions. The server allows multiple users to simultaneously access the data without each having to contact each of the dataloggers.

LoggerNet's support applications provide an interface for retrieving, storing, and displaying data from the datalogger network.

# Applications

## Vehicle Monitoring and Testing

The versatile, rugged design and low power requirements of the CR5000 make it well suited for vehicle monitoring. Vehicle monitoring includes not only passenger cars, but locomotives, airplanes, helicopters, tractors, buses, heavy trucks, drilling rigs, race cars, ATVs and motorcycles. The CR5000 can provide cold and hot temperature, high altitude, off-highway, and cross-country performance testing. It is compatible with our SV8Plus GPS receiver, SDM-CAN interface, and the DSP4 Heads Up Display.

*The CR5000 is ideal for cross-country performance testing. For example, a system could monitor geographic position and velocity then transmit performance and position data to the home office via cellular phone.*

Common measurements include:

- **Suspension**—strut pressure, spring force, travel, mounting point stress, deflection, ride
- **Fuel system**—line and tank pressure, flow, temperature, injection timing
- **Comfort control**—ambient and supply air temperature, solar radiation, fan speed, blower currents, ac on/off, refrigerant pressures, time-to-comfort
- **Brakes**—line pressure, pedal pressure and travel, ABS, fluid and pad temperature
- **Engine**—pressure, temperature, crank position, RPM, time-to-start, oil pump cavitation
- **General vehicle**—chassis monitoring, road noise, traction, payload, vehicle position/speed, steering, air bag, hot/cold soaks, wind tunnels, CANbus, wiper speed/current, vehicle electrical loads

*A CR5000-based system can monitor conditions at power generation plants (hydroelectric, solar, and wind), terminals, substations, oil and gas pumping facilities, and along transmission lines.*

## Eddy Covariance Systems

These systems use Eddy covariance techniques to calculate water vapor, carbon dioxide, and heat flux. Below are the sensors used and their measurements:

- **CSAT3 Sonic Anemometer** — absolute wind and sonic temperature fluctuations
- **KH20 Hygrometer** — fluctuations of atmospheric water vapor
- **CS7500 Infrared Gas Analyzer** — both absolute CO<sub>2</sub> and water vapor
- **FW05 Fine Wire Thermocouple** — absolute temperature

The CR5000 measures the above sensors and computes fluxes on-line. The raw time-series data can be saved to a PC-card, along with processed data for later analysis. A PC at the site is not required. The CR5000's storage capacity can be increased using PC cards.

*For Eddy covariance applications, the CR5000 can measure the CS7500 open-path CO<sub>2</sub> analyzer, CSAT3 Sonic Anemometer, and KH20 Krypton Hygrometer, then compute fluxes on-line.*

## Other Applications

- Laboratory applications
- Greenhouse monitoring
- Mining
- HVAC systems
- Aerospace/aviation
- Energy management and conservation
- Structural or fatigue analysis
- Machinery testing
- Process monitoring and control

# CR5000 Specifications

Electrical specifications are valid over a -25° to +50°C range unless otherwise specified; testing over -40° to +85°C available as an option, excludes batteries. Non-condensing environment required. Yearly calibrations are recommended to maintain electrical specifications.

## PROGRAM EXECUTION RATE

The CR5000 can measure one channel and store the result in 500  $\mu$ s; all 40 SE\* channels can be measured in 8 ms (5 kHz aggregate rate).

## ANALOG INPUTS

DESCRIPTION: 20 DF\* or 40 SE, individually configured. Channel expansion provided through AM16/32, AM416, and AM25T Multiplexers.

RANGES, RESOLUTION, AND TYPICAL INPUT

NOISE: Basic Resolution (Basic Res) is the A/D resolution of a single conversion. **Resolution of DFM\* with input reversal is half the Basic Res.** Noise values are for DFM with input reversal; noise is greater with SEM.\*

Input Rng (mV)	Basic Res ( $\mu$ V)	0 Int. ( $\mu$ V RMS)	250 $\mu$ s Int. ( $\mu$ V RMS)	20/16.7 ms Int. ( $\mu$ V RMS)
$\pm 5000$	167	70	60	30
$\pm 1000$	33.3	30	12	6
$\pm 200$	6.67	8	2.4	1.2
$\pm 50$	1.67	3.0	0.8	0.3
$\pm 20$	0.67	1.8	0.5	0.2

## ACCURACY<sup>†</sup>:

$\pm(0.05\%$  of Reading + Offset) 0° to 40°C

$\pm(0.075\%$  of Reading + Offset) -25° to 50°C

$\pm(0.10\%$  of Reading + Offset) -40° to 85°C

Offset for DFM w/input reversal =  
Basic Res +1  $\mu$ V

Offset for DFM w/o input reversal =  
2Basic Res + 2  $\mu$ V

Offset for SEM = 2Basic Res + 10  $\mu$ V

## MINIMUM TIME BETWEEN MEASUREMENTS:

Zero Integration:	125 $\mu$ s
250 $\mu$ s Integration:	475 $\mu$ s
16.7 ms Integration:	19.9 ms
20 ms Integration:	23.2 ms

COMMON MODE RANGE:  $\pm 5$  V

DC COMMON MODE REJECTION: >100 dB with input reversal (>80 dB without input reversal)

NORMAL MODE REJECTION: 70 dB @ 60 Hz when using 60 Hz rejection

SUSTAINED INPUT VOLTAGE WITHOUT DAMAGE:  $\pm 16$  Vdc

INPUT CURRENT:  $\pm 2$  nA typ.,  $\pm 10$  nA max. @ 50°C

INPUT RESISTANCE: 20 G $\Omega$  typical

ACCURACY OF INTERNAL THERMOCOUPLE REFERENCE JUNCTION:

$\pm 0.25^\circ\text{C}$ , 0° to 40°C  
 $\pm 0.5^\circ\text{C}$ , -25° to 50°C  
 $\pm 0.7^\circ\text{C}$ , -40° to 85°C

## ANALOG OUTPUTS

DESCRIPTION: 4 switched voltage; 4 switched current; 2 continuous voltage; switched outputs active only during measurements, one at a time.

RANGE: Voltage (current) outputs programmable between  $\pm 5$  V ( $\pm 2.5$  mA)

RESOLUTION: 1.2 mV (0.6  $\mu$ A) for voltage (current) outputs

ACCURACY:  $\pm 10$  mV ( $\pm 10$   $\mu$ A) for voltage (current) outputs

CURRENT SOURCING: 50 mA for switched voltage; 15 mA for continuous

CURRENT SINKING: 50 mA for switched voltage; 5 mA for continuous (15 mA w/selectable option)

COMPLIANCE VOLTAGE:  $\pm 5$  V for switched current excitation

## RESISTANCE MEASUREMENTS

Provides voltage ratio measurements of 4- and 6-wire full bridges, and 2-, 3-, 4-wire half bridges. Direct resistance measurements available with current excitation. Dual-polarity excitation is recommended.

VOLTAGE RATIO ACCURACY<sup>†</sup>: Assumes input and excitation reversal and an excitation voltage of at least 2000 mV.

$\pm(0.04\%$  Reading + Basic Res/4) 0° to 40°C

$\pm(0.05\%$  Reading + Basic Res/4) -25° to 50°C

$\pm(0.06\%$  Reading + Basic Res/4) -40° to 85°C

## ACCURACY<sup>†</sup> WITH CURRENT EXCITATION:

Assumes input and excitation reversal, and an excitation current,  $I_x$ , of at least 1 mA.

$\pm(0.075\%$  Reading + Basic Res/2 $I_x$ ) 0° to 40°C

$\pm(0.10\%$  Reading + Basic Res/2 $I_x$ ) -25° to 50°C

$\pm(0.12\%$  Reading + Basic Res/2 $I_x$ ) -40° to 85°C

## PERIOD AVERAGING MEASUREMENTS

DESCRIPTION: The average period for a single cycle is determined by measuring the duration of a specified number of cycles. Any of the 40 SE analog inputs can be used; signal attenuation and ac coupling may be required.

## INPUT FREQUENCY RANGE:

Input Rng (mV)	Signal (peak to peak) Min. Max. <sup>1</sup>	Min. Pulse W.	Max. Freq
$\pm 5000$	600 mV 10 V	2.5 $\mu$ s	200 kHz
$\pm 1000$	100 mV 2.0 V	5.0 $\mu$ s	100 kHz
$\pm 200$	4 mV 2.0 V	25 $\mu$ s	20 kHz

<sup>1</sup>Maximum signals must be centered around datalogger ground.

RESOLUTION: 70 ns/number of cycles measured

ACCURACY:  $\pm(0.03\%$  of Reading + Resolution)

## PULSE COUNTERS

DESCRIPTION: Two 16-bit inputs selectable for switch closure, high frequency pulse, or low-level ac.

MAXIMUM COUNT: 4 x 10<sup>9</sup> counts per scan

## SWITCH CLOSURE MODE:

Minimum Switch Closed Time: 5 ms  
Minimum Switch Open Time: 6 ms  
Maximum Bounce Time: 1 ms open without being counted.

## HIGH FREQUENCY PULSE MODE:

Maximum Input Frequency: 400 kHz  
Maximum Input Voltage:  $\pm 20$  V  
Voltage Thresholds: Count upon transition from below 1.5 V to above 3.5 V at low frequencies. Larger input transitions are required at high frequencies because of 1.2  $\mu$ s time constant filter.

## LOW LEVEL AC MODE:

Internal ac coupling removes dc offsets up to  $\pm 0.5$  V.

Input Hysteresis: 15 mV	
Maximum ac Input Voltage: $\pm 20$ V	
Minimum ac Input Voltage (sine wave):	
(mV RMS)	Range (Hz)
20	1.0 to 1000
200	0.5 to 10,000
1000	0.3 to 16,000

## DIGITAL I/O PORTS

DESCRIPTION: 8 ports selectable as binary inputs or control outputs.

OUTPUT VOLTAGES (no load): high 5.0 V  $\pm 0.1$  V; low < 0.1 V

OUTPUT RESISTANCE: 330  $\Omega$

INPUT STATE: high 3.0 to 5.3 V; low -0.3 to 0.8 V

INPUT RESISTANCE: 100 k $\Omega$

## EMI and ESD PROTECTION

The CR5000 is encased in metal and incorporates EMI filtering on all inputs and outputs. Gas discharge tubes provide robust ESD protection on all terminal block inputs and outputs. The following European CE standards apply.

EMC tested and conforms to BS EN61326:1998.

Details of performance criteria applied are available upon request.

**Warning:** This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to correct the interference at the user's own expense.

## CPU AND INTERFACE

PROCESSOR: Hitachi SH7034

MEMORY: Battery-backed SRAM provides 2 Mbytes for data and operating system use with 128 kbytes reserved for program storage. Expanded data storage with PCMCIA type I, type II, or type III card.

DISPLAY: 8-line-by-21 character alphanumeric or 128 x 64 pixel graphic LCD display w/backlight.

SERIAL INTERFACES: Optically isolated RS-232 9-pin interface for computer or modem. CSI/O 9-pin interface for peripherals such as CSI modems.

BAUD RATES: Selectable from 1,200 to 115,200 bps. ASCII protocol is eight data bits, one start bit, one stop bit, no parity.

CLOCK ACCURACY:  $\pm 1$  minute per month, -25° to +50°C;  $\pm 2$  minute per month, -40° to +85°C

## SYSTEM POWER REQUIREMENTS

VOLTAGE: 11 to 16 Vdc

TYPICAL CURRENT DRAIN: 400  $\mu$ A software power off; 1.5 mA sleep mode; 4.5 mA at 1 Hz (200 mA at 5 kHz) sample rate.

INTERNAL BATTERIES: 7 Ahr rechargeable base (optional); 1650 mAh lithium battery for clock and SRAM backup, 10 years of service typical, less at high temperatures.

EXTERNAL BATTERIES: 11 to 16 Vdc; reverse polarity protected.

## PHYSICAL SPECIFICATIONS

SIZE: 9.8" x 8.3" x 4.5" (24.7 cm x 21.0 cm x 11.4 cm)  
Terminal strips extend 0.4" (1.0 cm).

WEIGHT: 4.5 lbs (2.0 kg) with low-profile base; 12.2 lbs (5.5 kg) with rechargeable base

## WARRANTY

Three years against defects in materials and workmanship.

\*SE(M): Single-Ended (Measurement)

\*DF(M): Differential (Measurement)

<sup>†</sup> Sensor and measurement noise not included.

We recommend that you confirm system configuration and critical specifications with Campbell Scientific before purchase.
